

## Green Reaper Costume statement of Work

The costume is to be kelly green (rather than the acid green in the attached drawing) with a foam underlay for the structure rather than just hanging cloth. The sleeves need to be sleeve-like rather than stiff from a foam underlay. The character will have white character gloves and peter-pan like shoes and sit 2-4 inches off the ground (depending on who is wearing it) to help keep the costume clean. It needs to be constructed so that someone 5'6" to 5' 10" can wear it. Because Las Vegas is so hot, cooling vents will be needed for comfort. The face can be a screen material for vision and breathing. The white lines in the attached drawing demonstrate depth so do not need to be translated to the costume.

The staff carried by the reaper is to be translated instead into an appliqu  on the front of the costume of a white daisy with a blue and green earth at the center. This will allow the character to have the hands free to interact with children as part of community outreach.

This costume needs to be delivered by September 15, 2012. The costume must come with a shipping case.
